features

Keyes-Davis Metal Markers provide positive identification with minimum labor, are permanent and will withstand the elements, abrasion, and corrosion. Common uses include: coding, instructions, warning, banding, grouping, and tying. Markers are cleanly blanked from the finest materials and will last years under normal usage.

used by

Metal Markers are primarily used by the OEM Electrical and Electronic trades as well as service and field use. Manufacturers of aircraft, controls, cables, motors, panel boards, autos, missiles and ordnance have also found Keyes-Davis markers a valuable asset to their products.

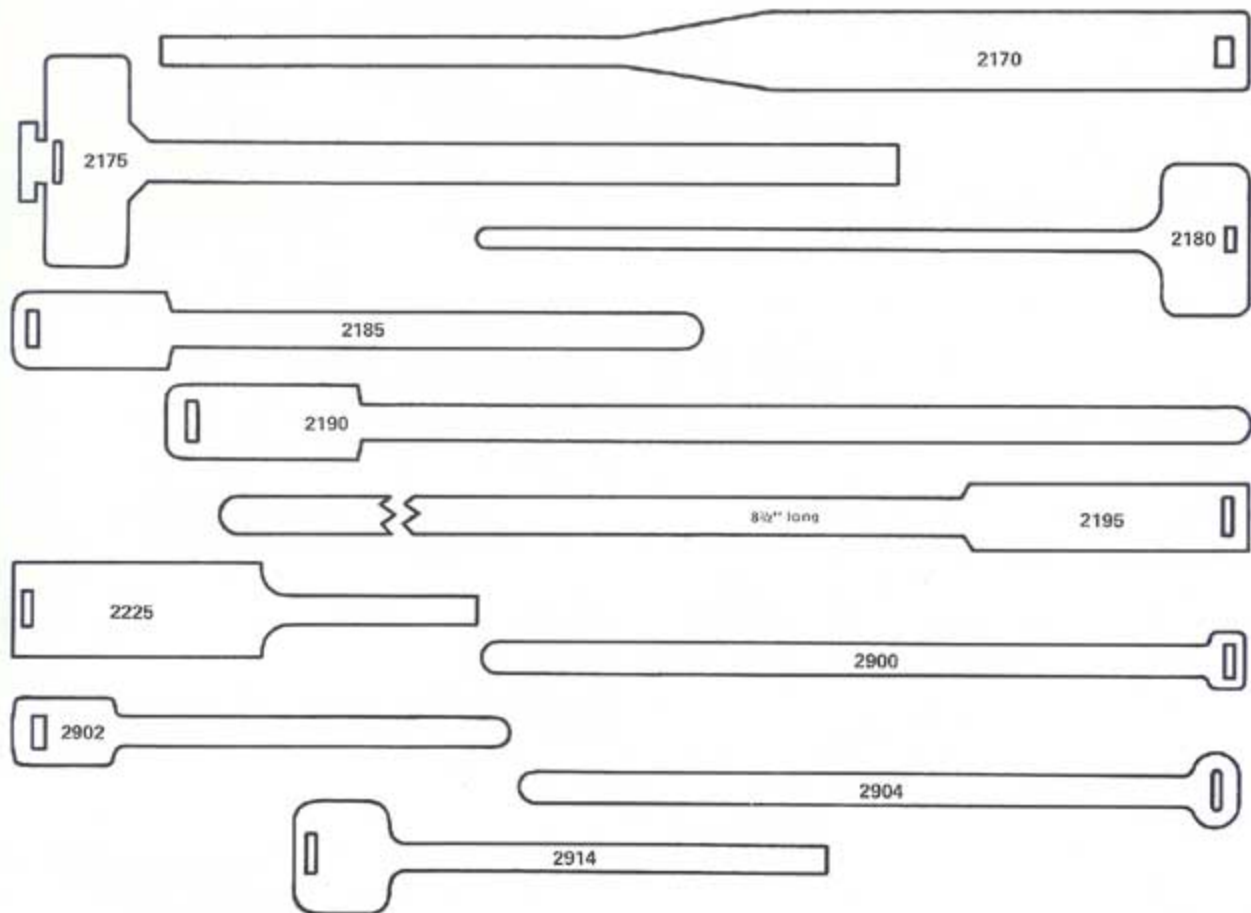

standard material

Most Metal Markers are made from .012 and .020 aluminum with stainless steel, zinc, brass, copper and lead also being available in standard gauges. Aluminum markers are also available with color anodized, painted and irridite finishes.

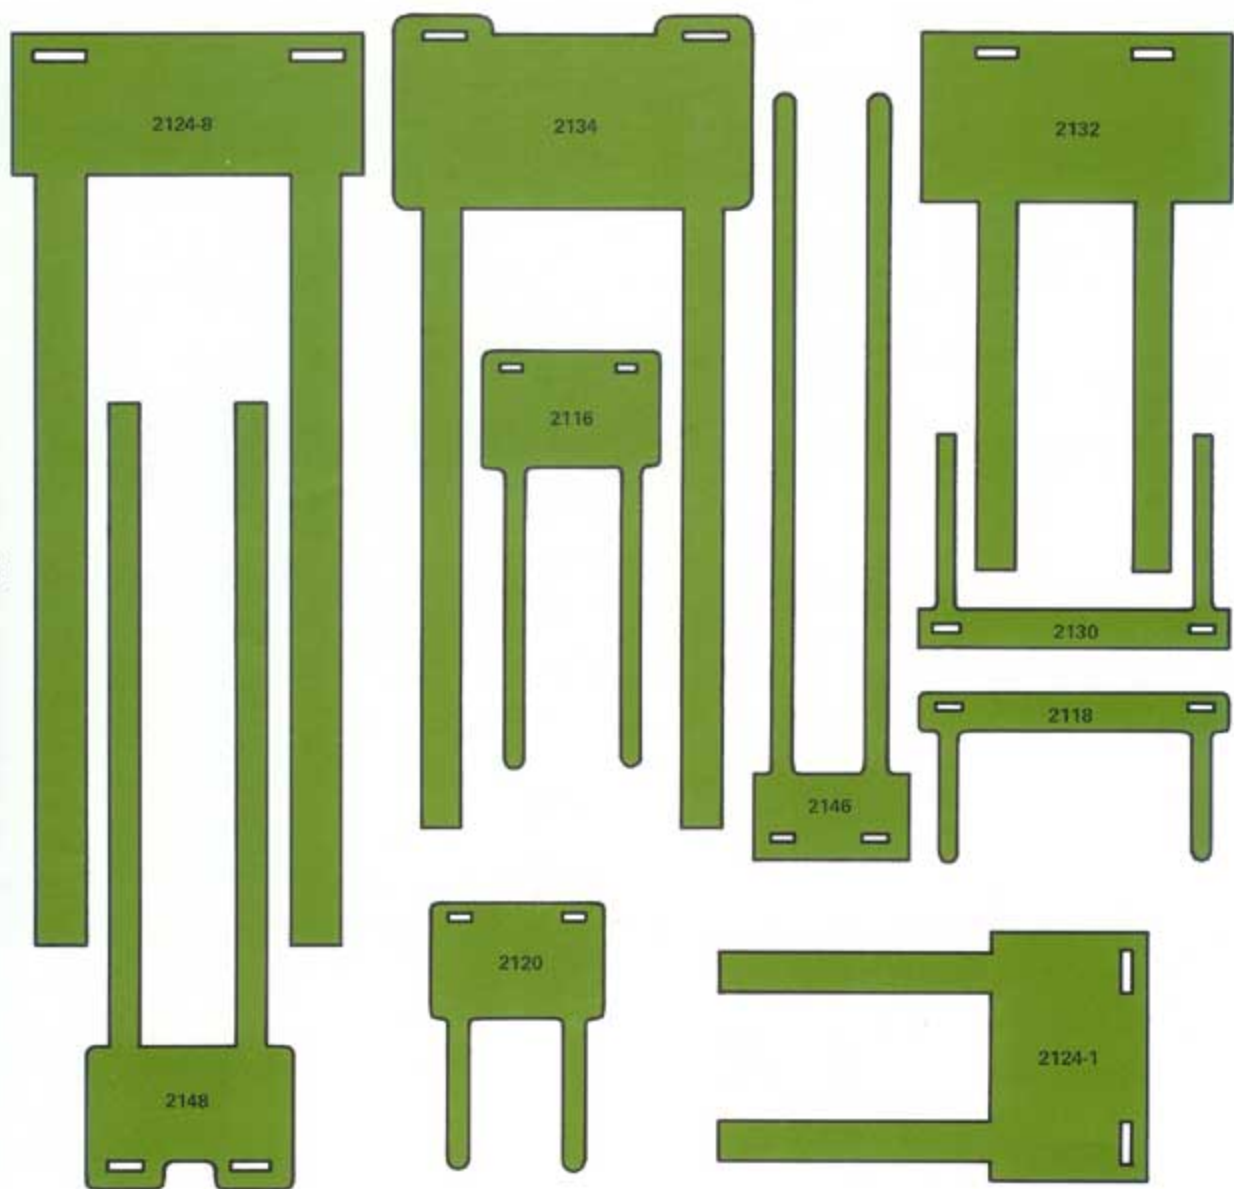

special markers

We will be happy to quote on modifications to our markers, or completely new designs if one of our standards will not fill your requirement.

CODING BY COLOR

Over 50 distinctly different shapes in 12 different colors of Polyethylene available with hole for tie on or screw/rivet mounting. Request Small Tag Catalog for style selection.

MARKING:

Where your marking can be predetermined, Keyes-Davis will stamp or indent the required texts at low cost. Standard marking is gothic letters and numbers in 3/32", 1/8", 3/16", 1/4", and 5/16". We will be happy to quote on special insignia, designs, trademarks, and an embossing or etching as required.

We also can supply hand stamps or marking machines for in-plant marking, fill-in, or special texts which cannot be predetermined.

See our separate price list for quantity pricing of plain and stamped markers, cross reference to military, ordnance, and other government specifications, "how-to-order" and other data.
